

Mark L. Nilsen- *Senior Director, BBK Southfield*

Mark has more than 25 years of experience in industrial, manufacturing and service management; 18 of those years includes coordinating Value Analysis and Value Engineering teams to identify, evaluate, implement, monitor and report on product cost reduction projects.

Mark's project management experience includes inventory control, production, scrap, logistics and vendor management. He has successfully developed and implemented process changes for continuous improvement, performed numerous capability and capacity analyses, and has been extremely successful in defect reductions and quality process improvements.

Within the service industry, Mark has a proven ability to organize and implement successful management structures. His service improvement strategies encompass marketing, product development and cost reduction.

Mark's organizational skills have been valuable in a number of liquidation and business re-sourcing situations, as well as coordinating multiple interests on going concerns.. His hands-on approach to problem solving and systems improvement has resulted in teams that continue to achieve maximum results long after his departure.

Background

- Operations Management
- Performance Improvement
- Production Controls and Logistics
- Quality Control
